

D2 SOLUTIONS ENHANCES PATIENT ENGAGEMENT TECHNOLOGY WITH MULTI-LANGUAGE SUPPORT

D2 has equipped UltraTouch® Engage with multi-language support, starting with Spanish.

-

ST. LOUIS - FEBRUARY 21, 2024

[D2 Solutions](#) proudly announced today a significant enhancement to their automated patient outreach solution. [UltraTouch® Engage](#) is now fully equipped with multi-language support, beginning with the Spanish language.

This expansion of UltraTouch® Engage's capabilities comes as a response to the growing need for diverse language support within healthcare settings. With the ability to automate patient communication in other languages, Engage ensures that client-partners can help a broader spectrum of patients accelerate speed-to-therapy and stay on therapy in a manner that ensures maximum clinical value.

"We are excited to provide this capability to our client-partners," states Dean Erhardt, D2's Founder & CEO. "At D2 our goal is to provide our partners with the tools they need to support their patients. This addition to Engage extends the benefits of enhanced patient access to those patients who need Spanish-speaking support."

D2 Solutions remains dedicated to advancing healthcare technology solutions that prioritize patient-centric care and promote equitable access to healthcare services. This integration of the Spanish language, and additional languages as needed, underscores this commitment and represents a significant step forward in addressing the needs of diverse patient populations and our client-partners.
